OBJECTIVE

Aspiring software professional with knowledge of Java, Python, and SQL, and a keen interest in software development and problem-solving. Seeking an opportunity to contribute to real-world projects, learn emerging technologies, and grow professionally while delivering value to the organization.

EDUCATION

B.E in Computer Science Engineering	2023 – 2027
Saveetha School of Engineering	CGPA: 8.5
Senior Secondary (XII)	2021 – 2023
Board of Intermediate Education, Andhra Pradesh	92.5%
Secondary (X)	2021
Indian Certificate of Secondary Education, Andhra Pradesh	84%

EXPERIENCE

HCLTech Career Shaper Program	Feb. 2026 - Present
<i>Data Engineering with Visualization and Analytics</i>	
• Learning data preprocessing, cleaning, and transformation techniques using Python, Pandas, and NumPy. • Performing exploratory data analysis (EDA) to identify trends and patterns in structured datasets. • Building and evaluating machine learning models for predictive analytics and data-driven decision-making. • Creating interactive visualizations and reports using Matplotlib and Seaborn to communicate findings effectively. • Working with real-world datasets to understand data workflows, feature engineering, and analytics concepts. • Applying statistical analysis techniques to interpret data and support data-driven decision-making. • Learning machine learning concepts and model evaluation techniques for predictive analytics. • Developing practical knowledge of the end-to-end data analytics lifecycle through industry-aligned assignments and case studies. • Gaining exposure to reporting methodologies and data visualization best practices.	

PROJECTS

•Food Delivery Dashboard Power BI	GitHub
– Built an interactive Power BI dashboard to analyze food delivery orders, delivery time, and city-wise trends. – Cleaned and transformed data using Power Query and created DAX measures for key KPIs such as Total Orders and Average Delivery Time. – Designed charts, tables, and slicers for interactive data exploration and reporting. – Presented delivery performance insights through clear and user-friendly visualizations.	
•Retail Sales Dashboard Power BI	GitHub
– Developed an interactive dashboard to analyze retail sales, profit, discount, and quantity across regions and categories. – Prepared the dataset using Power Query and created DAX measures for business KPIs. – Built KPI cards, charts, maps, and slicers to support region-wise and category-wise sales analysis. – Visualized sales trends and performance metrics to enable effective business reporting. – Technologies used: Power BI, Power Query, DAX	

TECHNICAL SKILLS

- **Programming Languages:** Python, SQL, Java(Basic)
- **Core Concepts:** OOP, DSA, DBMS
- **Libraries:** Pandas, Numpy, Matplotlib
- **Tools:** PowerBI, Streamlit, Jupyter Notebook, Vs Code, Git, GitHub

CERTIFICATIONS
